Learning Agenda 26’

Building Profitable Growth (DTC as a Channel)

PMO, April 2026

1 EXECUTIVE SUMMARY

TaDa Mexico has two high-impact growth levers in play: improving acquisition efficiency and reducing churn. Both represent significant and complementary growth opportunities.

Acquisition Learning Agenda

- Identified a set of experiments to increase NC acquisition by ~50% and **reduce CAC by ~31%.**
- Current focus is on **Media Mix experiments**, with ~20% NC acquisition upside from optimizing the mix based on Marketing Mix Modelling insights and introducing new channels.
- **Two media experiments are currently live** - increased Digital Awareness Spend and re-introduction of Jampp - with early positive signals and final results expected in June.
- In parallel, we see a strong opportunity in Acquisition Hooks; execution is slower, but this remains an important growth lever.

Retention Learning Agenda

- **Identified key churn drivers** through transactional analysis, surveys, and consumer interviews.
- Churn is driven by **3 structural factors**:
  - **~40% Gradual Loss of Engagement** → accumulation of small frictions (delivery time, stock availability, cancellations, etc.)
  - **~30% Value Exit** → main gap in price versus value perception
  - **~30% Failure to build early habit** → churn in acquisition month with 2+ orders
- **~60% of churned consumers switch to offline channels**, not competitors
- **Key implication:** Retention is highly driven by **operational excellence and value perception**
- **Next focus:** Improve core experience and reliability (**Perfect Service >95%**), while deep diving into early churn reasons during acquisition month.

Full documentation of experiments and status: link

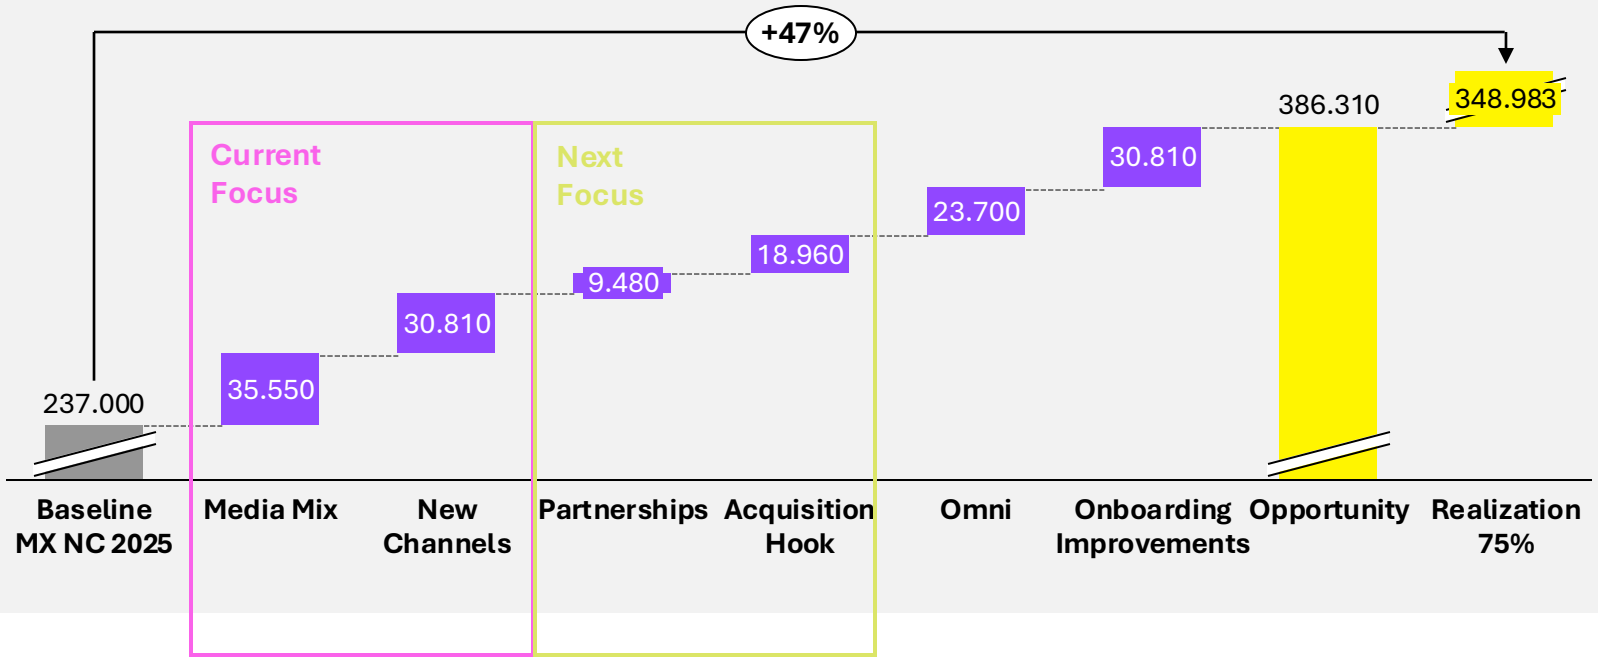

2 TADA ACQUISITION LEARNING AGENDA

2 Marketing Efficiency LA

Reaching a more efficient NC acquisition is not about one big bet but executing multiple structural levers with focus and speed.

The following graphs lays out the potential to improve Acquisition Efficiency. Possible upsides were set using our MMM model, external benchmarks and internal assumptions. A realization potential of 75% was assigned to account for execution risk and potential overlap.

Learning Agenda Levers

With a Realization assumption of 75%, we can conclude an opportunity to

- increase **NC Acquisition by +50%,**
- **Reduce CAC by ~35%,** to 21 USD,
- Reaching a **LTV/CAC of ~1.5** (assuming LTV stays flat)

Link to Learning Agenda: LINK

2 Media Mix

A Mindset Shift in Measurement: Prioritizing Incrementality Over Attribution

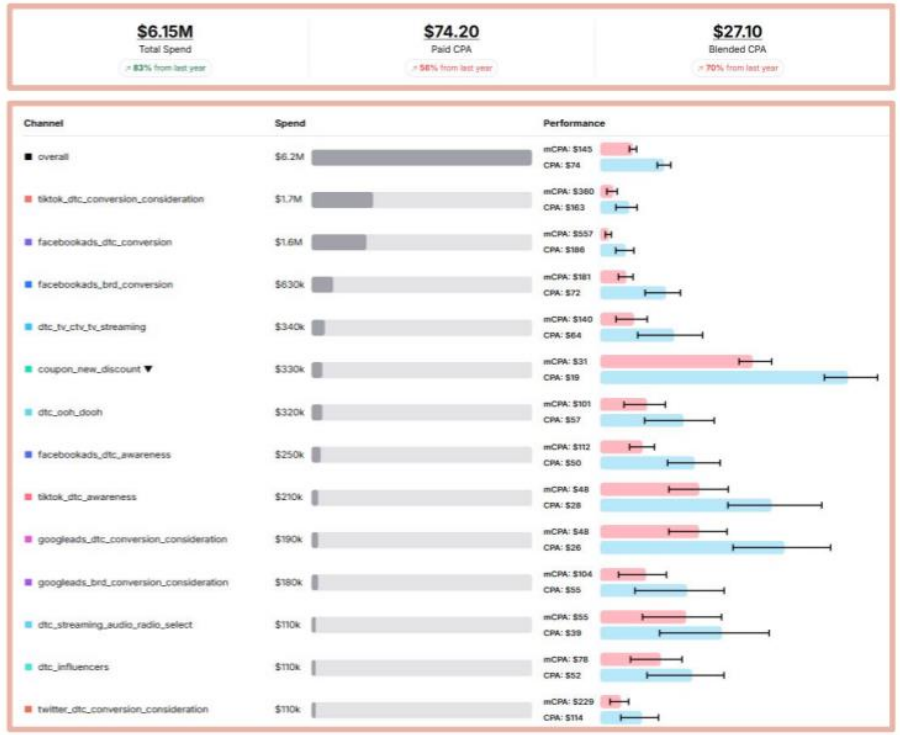

Recast is our MMM partner, with insights derived from three years of data, using 2025 as the baseline. These insights are shaping our media experimentation roadmap, with GeoLift as the core validation framework.

Recast Sync

Marketing Effectiveness - New Customers

Link to Report

- In 2025, paid CAC for TaDa New Customers was $74, a 56% increase compared to year ago
- In latest year, the largest spend increases were in paid social conversion, with Facebook DTC Conversion growing from $928k to $1.5M and TikTik DTC Conversion from $259k to $1.7M
- Newer channels including Influencers, OOH, Streaming Audio, and CTV are helping offset some of this cost pressure by delivering more efficient incremental customers
- Facebook and TikTok conversion channels are now highly saturated, while Google Search, OOH, TikTok Awareness, and Influencers remain below average marginal CAC and represent the primary efficiency opportunities

2 Media Mix

Active experiments

Increasing awareness spend – **digital awareness spend** – as well as shifting budget from Social Media Conversion to **Google and Programmatic (Jampp)** were identified as main opportunities.

1

Hypothesis

Increasing **Digital Awareness** share (50%) will expand the demand pool and reduce lower-funnel cannibalization, driving incremental new consumers.

Methodology

Geo-Lift Test in Merida & Tuxtla vs. Synthetic CG (MMM)

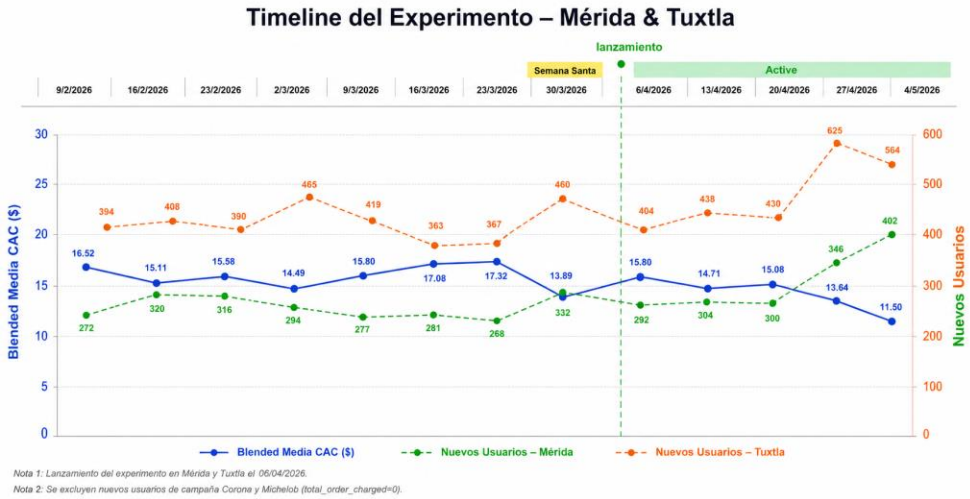

Merida & Tuxtla

	BAU	Target	ACT	VAR %
Blended CAC	$16.7	$13-15	$11.50	-31%
New Cons.	658	750-850	966	46%
Budget	$11K	$11K	$11K	-

All Cities w/o Torreón & Test

Blended CAC	$37.3		$41	10%
New Cons.	3.057	-	3.432	13%
Budget	$114k		$141K	9.6%

BAU = 3 Weeks PRE w/o Easter Week
LW = From 04/05 to 10/05 w/o Corona & Michelob campaign impact (total_order_charged=$0)

2 Media Mix

Active experiments

Increasing awareness spend – **digital awareness spend** – as well as shifting budget from Social Media Conversion to **Google and Programmatic (Jampp)** were identified as main opportunities.

2

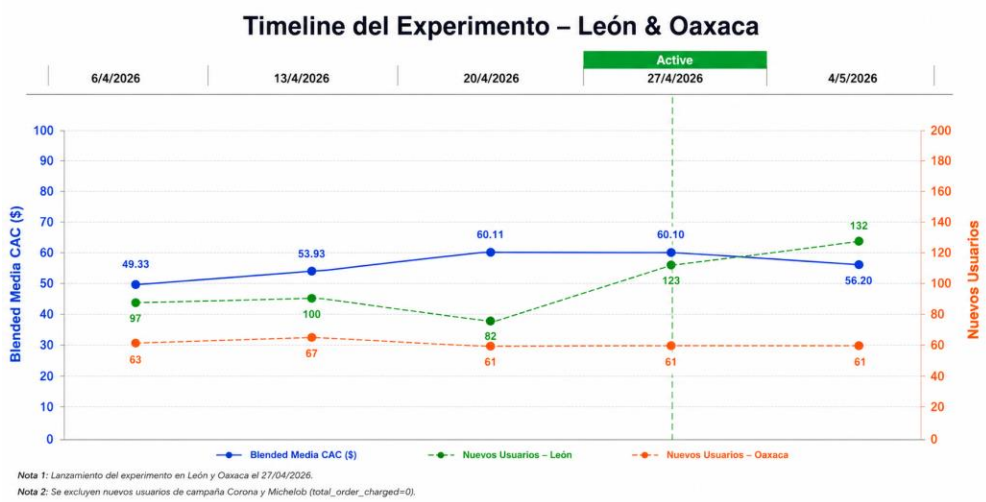

Hypothesis

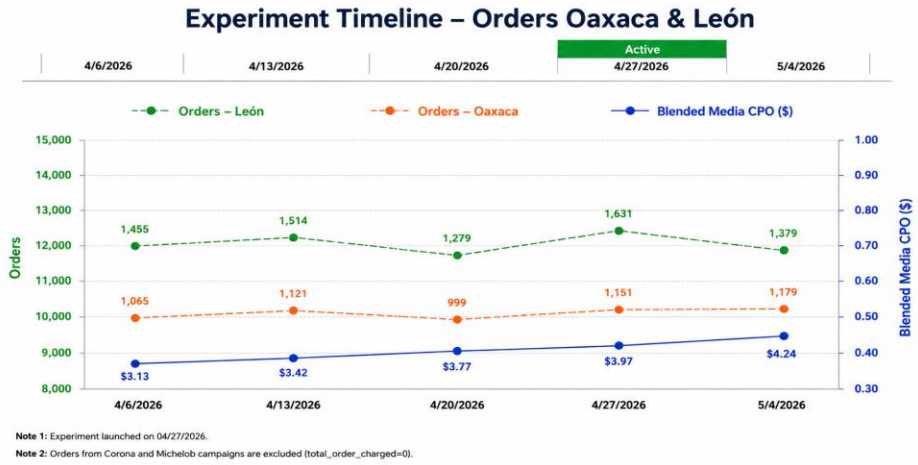

CAC increased significantly since mid-2024, aligning with a **shift of budget from Google and Jampp Conversion to TikTok Conversion**. -> Reintroducing Jampp will reduce CAC.

Methodology

Geo-Lift Test in Leon & Oaxaca vs. Synthetic CG (MMM)

	BAU	Target	ACT	VAR %
Blended CAC	$54	$45-$50	$56	3%
New Cons.	160	200-220	193	20%

2 Timeline

Deprioritized: AI Search, SEO, Retail Media

3

TADA RETENTION LEARNING AGENDA

3 Retention context MX

Improving retention is a key unlock for profitable growth. We can observe a declining shape of retention curve over time, as well as decreasing retention year over year.

Focus now: Deep Understanding of churn drivers:

Phase 1: Churn Understanding → **Identify key churn drivers and user pain points.**

Phase 2: Ideation & Experimentation → Test solutions to validate impact on churn.

Phase 3: Scaling → Roll out high-impact initiatives at scale.

3 Methodology

We combined internal data analysis with consumer insights to identify the key drivers of churn.

1

Internal Data Analysis

Leverages transactional data to identify churn patterns and key drivers.

Sample: Churned users without an order for 90 days, since 2024

2

Quantitative Survey

Quantifies customer feedback to validate drivers and measure impact at scale.

n = 374 survey results

3

Qualitative Interviews

Explores customer experiences to uncover root causes and unmet needs.

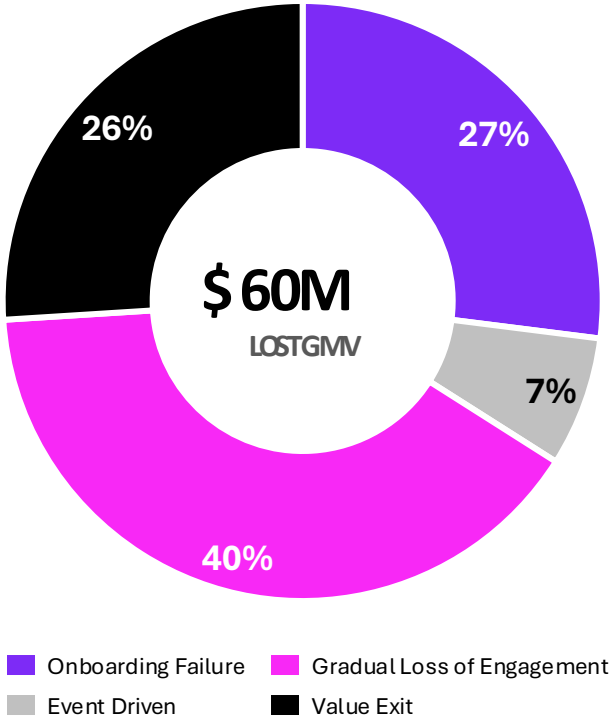

n = 11 depth interview

Output: Clear prioritization of actionable churn drivers to guide retention levers

Why do retained consumers churn?

3

We classify churn into four key patterns based on how and when users disengage.

40%

Gradual Loss of Engagement

Progressively reduce purchase frequency over time -> dis-engagement signal

Lost Annual GMV

$ 24M

27%

Onboarding Failure

Never build a repeat habit after initial 2 purchases during acquisition month

Lost Annual GMV

$ 16.2M

26%

Value Exit

Starts buying in other channels because of better offering

Lost Annual GMV

$ 15.6M

7%

Event Driven

Stop purchasing after a specific negative experience or event

Lost Annual GMV

$ 4.2M

Note:

- *7% of churn is involuntary (e.g., coverage changes, blocked accounts) and 35% is from 1-time buyers, so they are excluded from this framework.*
- *Insights are consistent across transactional and survey data, reinforcing their reliability*
- *Lost GMV is calculated by taking the number of churned consumers and multiplying with the average GMV per group per year.*

3

Experiencing small frictions over time can create disengagement with TaDa.

40%

Gradual Loss of Engagement

Progressively reduce purchase frequency over time – dis-engagement signal

Lost Annual GMV

$ 24M

Note: *Friction is* ***any issue that disrupts the user experience*** *and* ***creates frustration*** *(e.g. cancellations, delivery delays, tickets with bad resolution, product availability, low order rating, out-of operating hours, etc).*

3

Experiencing small frictions over time can create disengagement with TaDa.

40%

Gradual Loss of Engagement

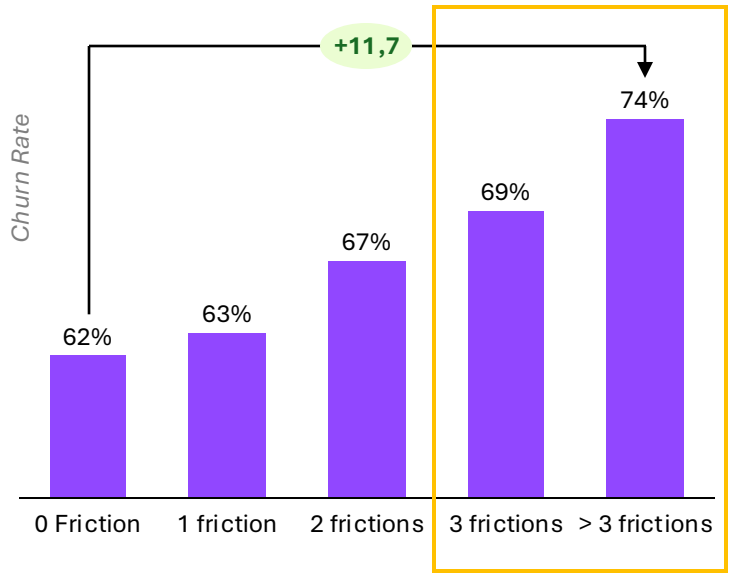

Progressively reduce purchase frequency over time – dis-engagement signal

Lost Annual GMV

$ 24M

Note: *Friction is* ***any issue that disrupts the user experience*** *and* ***creates frustration*** *(e.g. cancellations, delivery delays, tickets with bad resolution, product availability, low order rating, out-of operating hours, etc).*

Churn Rate per # of Frictions

> 50% of gradual loss churn users experience 3 or more frictions before churning.

3

Experiencing small frictions over time can create disengagement with TaDa.

40%

Gradual Loss of Engagement

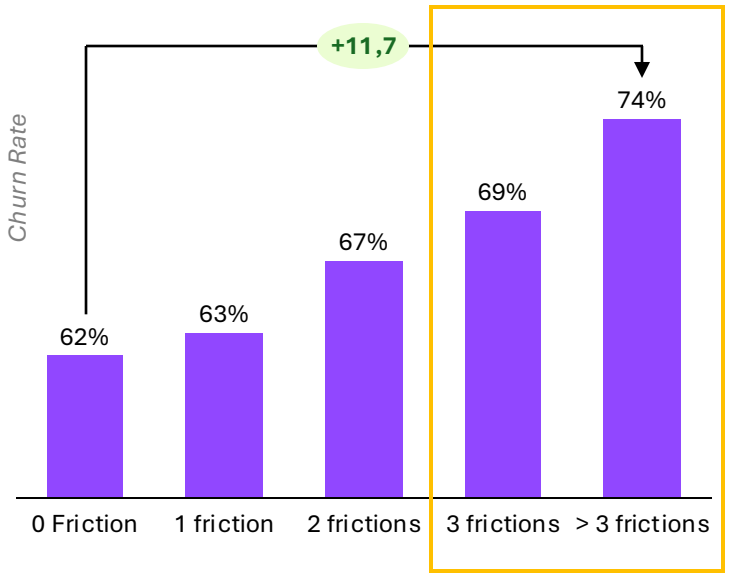

Progressively reduce purchase frequency over time – dis-engagement signal

Lost Annual GMV

$ 24M

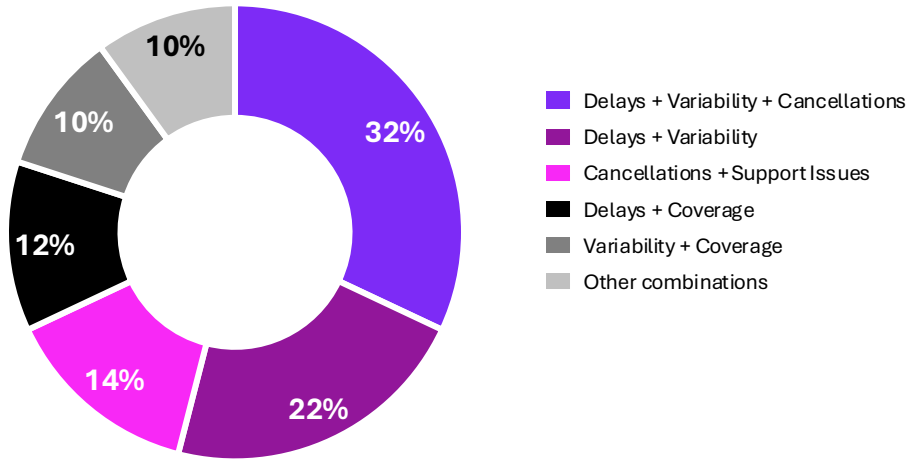

Note: *Friction is* ***any issue that disrupts the user experience*** *and* ***creates frustration*** *(e.g. cancellations, delivery delays, tickets with bad resolution, product availability, low order rating, out-of operating hours, etc).*

Churn Rate per # of Frictions

> 50% of gradual loss churn users experience 3 or more frictions before churning.

Top Friction Combinations

A **combination of frictions** regarding delivery time, variability of delivery time and cancellations are the main drivers.

Note: *Due to data restrictions, we could not include frictions of stockout in the analysis.*

3

If Engaged Consumers churn, they mostly switch to offline stores, like Modelorama, Oxxo or other convenience stores.

26%

Value Exit

Starts buying in other channels because of better offering

Lost Annual GMV

$ 15.6M

Note: *Churn driven by value exit were identified from churn survey and interview comments, using AI to classify them.*

3

If Engaged Consumers churn, they mostly switch to offline stores, like Modelorama, Oxxo or other convenience stores.

26%

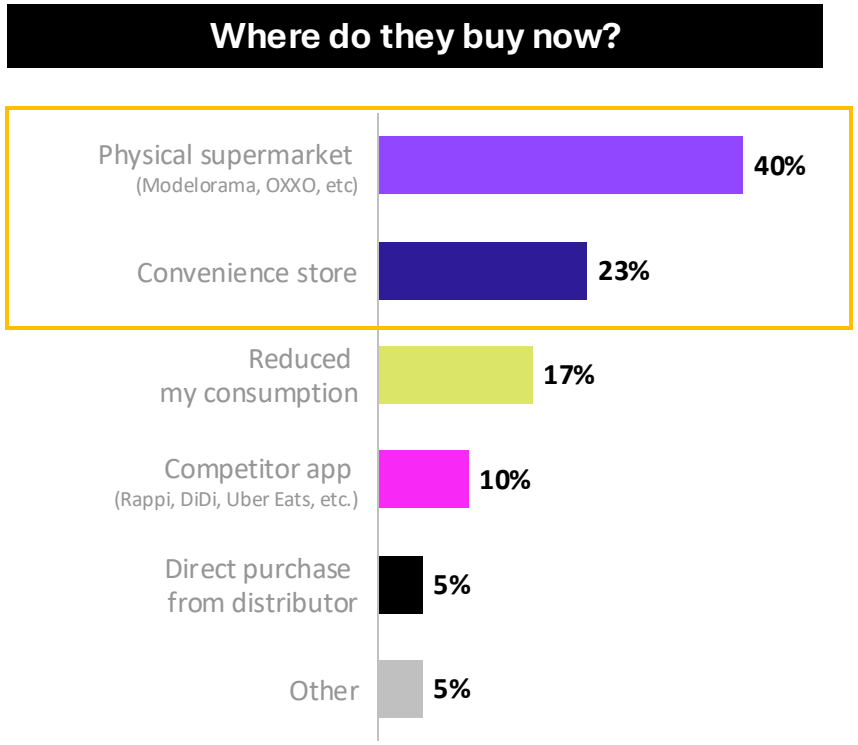

Value Exit

Starts buying in other channels because of better offering

Lost Annual GMV

$ 15.6M

Note: *Churn driven by value exit were identified from churn survey and interview comments, using AI to classify them.*

- **~60% of churned consumers** state they are now buying their beverages in **physical stores**.
- Only **10% state** they switched to another **on-demand platform.**

3

If Engaged Consumers churn, they mostly switch to offline stores, like Modelorama, Oxxo or other convenience stores.

26%

Value Exit

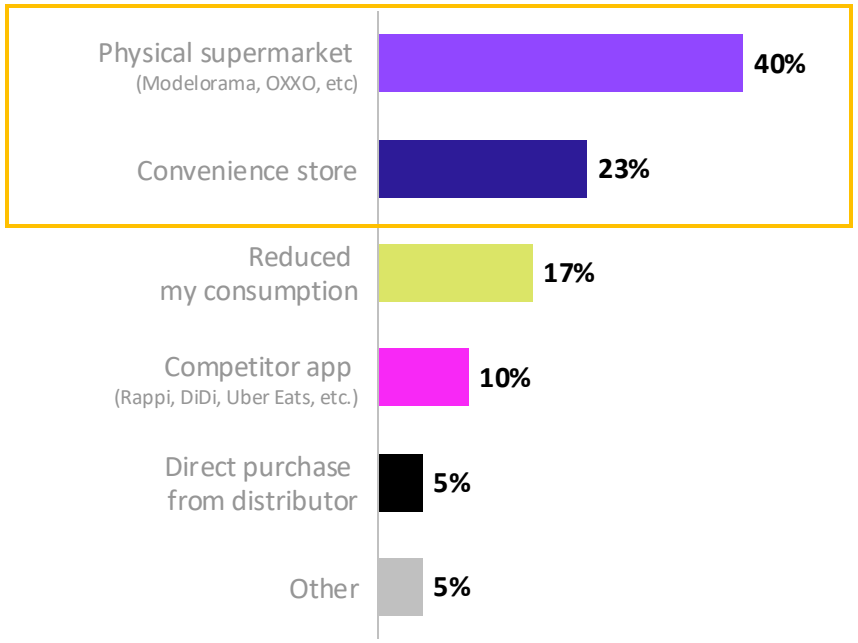

Starts buying in other channels because of better offering

Lost Annual GMV

$ 15.6M

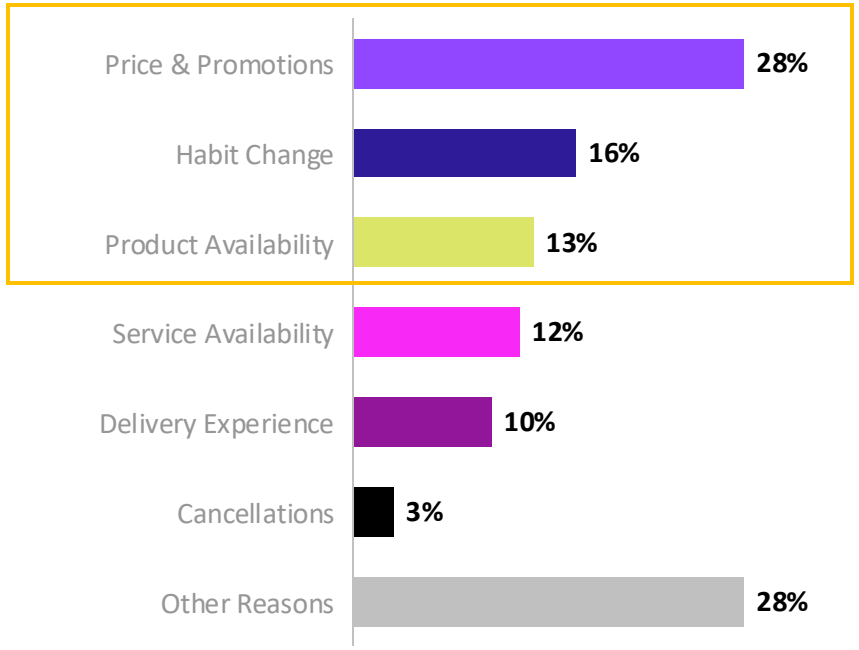

Note: *Churn driven by value exit were identified from churn survey and interview comments, using AI to classify them.*

Where do they buy now?

- **~60% of churned consumers** state they are now buying their beverages in **physical stores**.
- Only **10% state** they switched to another **on-demand platform.**

Why they see better value in other channels?

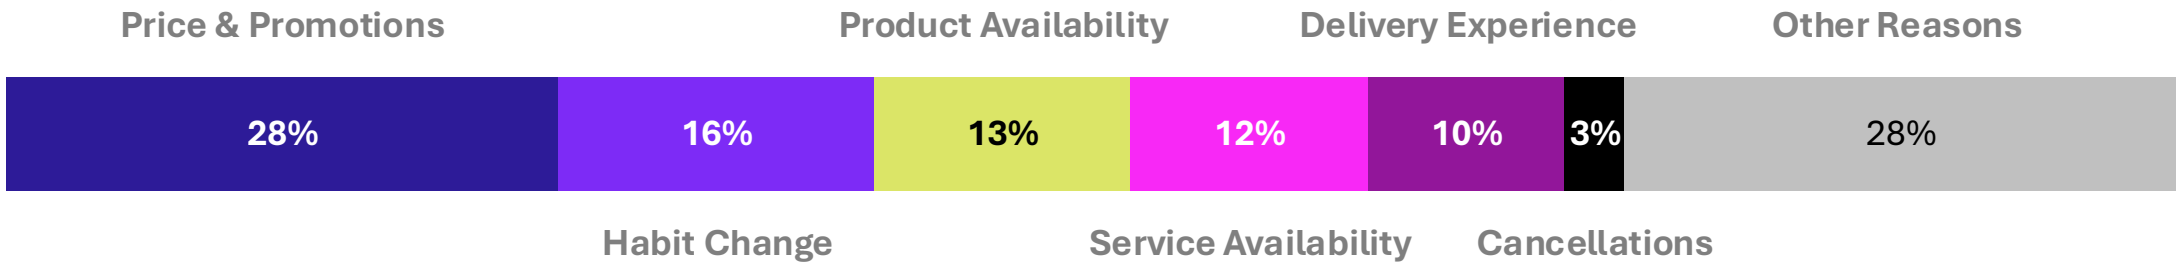

- **28% of churned consumers** state they are churning due to **price versus value** perception vs. competitors
- **~40%** state they switched to **service-related frictions.**
- **~40%** mention **more than 1 churn reason**

3

Question: *Si tuvieras que explicarle a un amigo por qué dejaste de usar TaDa, ¿qué le dirías?*

GRADUAL LOSS OF ENGAGEMENT

ENVIO & FRIO
*"Cobran mucho el **envío**, casi no dan cupones y **no llegan tan frías**"*

DISCOUNT X VOLUME
*"Hicieron complicada la compra, es **necesario comprar X cantidad** para que te **apliquen descuentos** reales"*

PROMOTIONS
*"Las **promociones** ya **no eran buenas** y los precios eran más altos que en otros lugares"*
*"Hay **mejores promociones en otras apps**"*

HABIT CHANGE
"Deje de consumir"

STOCK AVAILABILITY
*"Porque **ya no encuentro la cerveza** que a veces me gusta comprar"*

ASSORTMENT
***"No tienen surtido** y muchas veces no hay lo que necesito"*
*"No encuentro mis **productos habituales**"*

OUT OF COVERAGE
*"Porque **cerraron el servicio** en mi ciudad"*

SERVICE HOURS
*"**cierran temprano** y es más fácil ir al oxxo"*

CANCELLATIONS
*"Me **cancelaron varios pedidos** en momentos clave"*

CUSTOMER SUPPORT
*"**No solucionan en su soporte** ni atienden bien x el WhatsApp"*

DELIVERY EXPERIENCE - SLA
*"Mi pedido **llegó muy tarde en varias ocasiones** y eso me hizo dejar de usar la app"*

DELIVERY EXPERIENCE
*"He tenido **problemas con la terminal** que traen, **a veces me cancelan la orden** sin decir nada más y nunca sé si me va a llegar el **10 minutos o 2 horas**"*

FULLFILLMENT
*"Llega en **mal estado** o se **equivocan de productos**"*

DELIVERY EXPERIENCE - COLD
*"Por los tenderos, **cancelan** o te mandan **cerveza caliente**."*

3

The most important churn driver in event driven churn is delivery time >35', representing 48% of churned users into this bucket

7%

Event Driven

Stop purchasing after a specific negative experience or event

Lost Annual GMV

$ 4.2M

Note: *Other Event-driven churn like stock-out of out-of-service were not included due to data constraints.*

3

The most important churn driver in event driven churn is delivery time >35', representing 48% of churned users into this bucket

7%

Event Driven

Stop purchasing after a specific negative experience or event

Lost Annual GMV

$ 4.2M

Hypothesis	Driver	Signal	Causality	Impact (Users)	Annual GMV	Status
Received last order in >35min and never bought again	Experience	Strong	Medium	4.149	$2M	Validated
Had a cancellation and never bought again	Experience	Medium	Strong	1.867	$900k	Validated
Opened a CX ticket with resolution but negative CSAT and then never bought again	Customer Care	Medium	Medium	213	$106k	Validated
User entered the app, but the store was out of work and never bought again	Experience	Weak	Weak	-	-	Rejected

Note: *Other Event-driven churn like stock-out of out-of-service were not included due to data constraints.*

3

The most important churn driver in event driven churn is delivery time >35', representing 48% of churned users into this bucket

7%

Event Driven

Stop purchasing after a specific negative experience or event

Comments on churn reasons during consumer interviews

3

We interviewed 11 churned consumers, these were their reasons:

Gradual Loss

DELIVERY EXPERIENCE

*"**Se tardaban** hasta 40 minutos o más, me llegaban calientes y a veces **ni me avisaban**... ya cuando abría la cerveza decía 'no manches, no sabe buena'... por eso ya dejé de usarla, por su ineficiencia."*

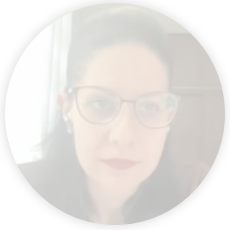

LIMITED HOURS + OVERALL VALUE

*"El **horario era muy reducido**... a veces queríamos pedir más tarde y ya no había servicio, entonces **mejor íbamos al Oxxo** que sí estaba abierto."*

CANCELLATIONS

*"Me **cancelaban el pedido** después de 40 minutos... **perdía tiempo** y hasta cupones. Me daba mucho coraje y mejor me fui a otra aplicación"*

UX

*"Antes era abrir la app y pedir, rapidísimo... después **se volvió complicado**, tenía que entender los cupones, ver condiciones... **ya no era fácil**, tenía que meterle esfuerzo mental."*

LIMITED HOURS

*"De repente entraba a la aplicación y ya no había ninguna tienda disponible... intenté varias veces y **ya no funcionaba**, entonces dejé de usarla"*

ASSORTMENT + AVAILABILITY

*"Lo principal que yo quería ya no estaba... empecé a cambiar a otras opciones, pero **lo que buscaba ya no lo encontraba**, entonces dejé de usarla."*

We interviewed 11 churned consumers, these were their reasons:

Value Exit

LOWER CONSUMPTION

*"Dejé de usarla porque **cambiaron mis hábitos**... ya no tenía tanto tiempo ni consumía igual, entonces simplemente dejé de pedir."*

PRICE + ASSORTMENT

*"Empecé a ver que **subían los precios** y había menos opciones... al final preferí caminar unas cuadras y comprar directo, porque **ya no valía la pena** pedir"*

PRICE VS VALUE

*"Empecé a hacer cuentas y ya **no me convenía**... entre **el envío y la propina se incrementaba el precio**, entonces mejor camino unas cuadras y me ahorro ese dinero"*

PRICE & PROMOS

*"Para mí fue un tema de costo... veía el precio y ya no daba. **Prefiero comprar más barato** en otro lado y tener cerveza en casa que pagar el sobreprecio"*

Event Driven

CUSTOMER CARE

*"Tenía puntos acumulados y nunca los pude usar... intenté **contactar soporte y no me resolvieron nada.** Eso fue suficiente para dejar de usarla"*

Key Takeaways & Next Steps

3

Gradual loss is the largest churn opportunity, rooted in operational excellence and consumer experience

40%

Size GMV
$24M

Gradual Loss of Engagement

10X EXPERIENCE

Operations and CX pilots to improve order journey and drive service reliability

1 Welcome Experience

First-order welcome kit with a branded item and message to encourage new consumers to place a second order within their first month.

Market: **Puebla** | KPI: + 4p.p in **FMR uplift** (31% > 35%) | Investment: **150k MXN**

2 Proactive Consumer Recovery

Daily & live review of consumers impacted by delays, cancellations or poor experiences, followed by proactive CX and CRM contact before they open a ticket.

Market: **Puebla** | KPI: + 15% in **7d Reorder** (69% > 80%) | Investment: **285k MXN**

3 Perfect Service Improvement

Extra seller incentive to increase courier availability during peak hours and improve delivery reliability.

Market: **Puebla** | KPI: +5 p.p in **Perfect Service** (90% > 95%) | Investment: **TBC**

PRODUCT EVOLUTION

Product-led bets to remove structural frictions and build consumer confidence.

4 Communication Ecosystem

Communication layer that connects sellers, couriers, consumers and CX during active orders to resolve issues before cancellation.

5 Hybrid Radius

Expand seller delivery coverage to ensure at least two eligible sellers per order, increasing transfer success and recovering more seller-cancelled orders.

6 Turbo Delivery

Optional premium delivery mode where eligible consumers pay an extra fee to receive orders within a 10–15 minutes SLA.

7 Real-Time Delivery ETA

Smarter delivery ETA based on each store's recent operational performance to give consumers more accurate delivery visibility.

8 Edit Order

Guided edit-order flow that cancels and recreates the order automatically when consumers need to change products, quantities or address.

3

Proactive Consumer Recovery

Q2

Experiment Overview

Insight

Operational frictions such as cancellations, delays and poor order experiences are the main drivers of gradual disengagement and churn. Today, TaDa typically reacts only after the consumer opens a ticket.

Hypothesis

If consumers experiencing operational issues receive proactive outreach and issue resolution before opening a ticket, they will be more likely to reorder and remain active.

Primary KPI: 7d Reorder Rate
Secondary KPI: Avg Days to Reorder

Pilot Scope

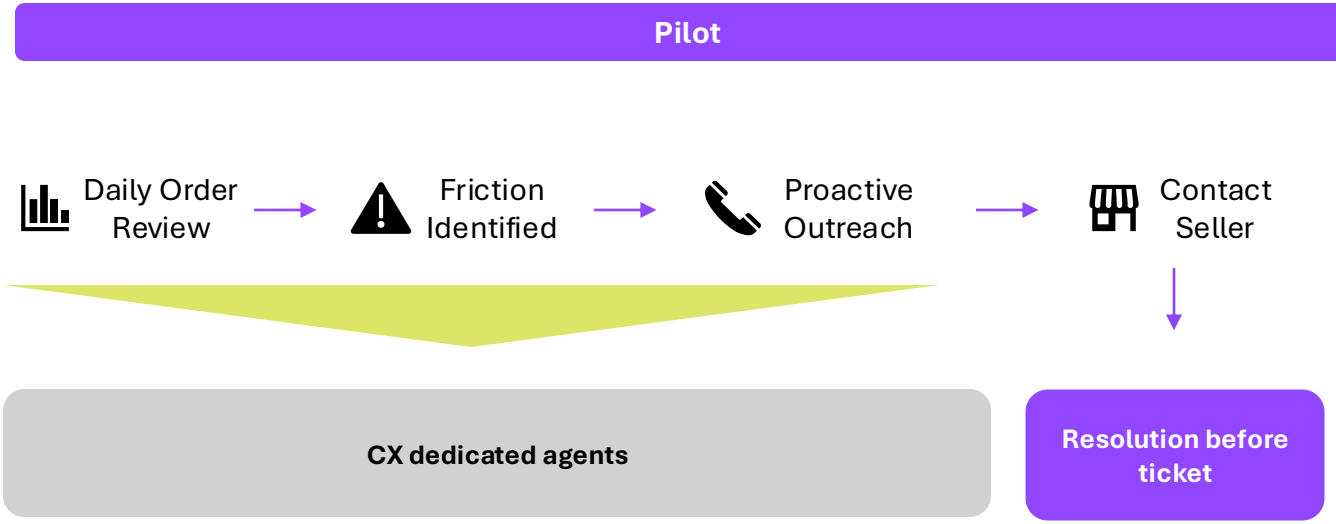

Market: Puebla

Audience: Users impacted by ops frictions

Duration: 3 months

Estimated Investment: 285k MXN (~16k USD)

Execution Flow

Expected Outcome

7day Reorder Rate				Avg Days to Reorder			
69,5%	→	80%	+ 15 % uplift	12,8	→	9,7	-3 days
Baseline		Pilot Target		Baseline		Pilot Target	

3 Improve Perfect Service

Experiment Overview

Insight

Operational frictions such as delays and cancellations are key drivers of churn. Markets with higher Perfect Service consistently show stronger retention, suggesting that service reliability plays a critical role in long-term consumer engagement.

Hypothesis

If sellers are incentivized to increase courier availability during peak hours, Perfect Service will improve, leading to fewer operational frictions and higher consumer retention.

Primary KPI: Perfect Service
Secondary KPI: Fill Rate

Pilot Scope

Market: Puebla

Estimated Investment: TBD

Execution Flow

Courier Incentive

Temporary incentive to increase courier availability during peak demand.

Higher Delivery Capacity

More couriers available to fulfill incoming orders.

Perfect Service Improvement

Higher Perfect Service, lower delays and fewer cancellations.

Expected Outcome

Perfect Service Improvement

88,5%
Baseline

→

95%
Pilot Target

+ 6.5 p.p uplift

3

Onboarding Experience: Welcome Kit

Experiment Overview

Insight

27% of churn is driven by consumers failing to build a repeat purchase habit after their first orders. The acquisition month is the most critical moment to establish long-term purchasing behavior.

Hypothesis

If new consumers receive a memorable welcome experience during their first order, they will be more likely to place 2 or more orders during their acquisition month compared to the historical baseline.

Primary KPI: % of New Drinkers with 2+ orders in the acquisition month
Secondary KPI: First Month Retention

Pilot Scope

Market: Puebla

Audience: New Drinkers

Duration: 3 months

Estimated Investment: ~150k MXN

Welcome Kit

Expected Outcome

2+ Orders Rate				FMR			
40%	→	48%	+ 8 p.p uplift	32%	→	35%	+ 4 p.p uplift
Baseline		Pilot Target		Baseline		Pilot Target	

3 Communication Ecosystem

Experiment Overview

Insight

Order cancellations are rarely caused by a single operational failure. Most are the result of communication gaps, delayed interventions and limited visibility across the order lifecycle.

Hypothesis

Improving communication between Sellers, Couriers, Consumers and CX will enable earlier operational interventions, reducing avoidable cancellations while improving Perfect Service and operational efficiency.

Primary KPI: Perfect Service
Secondary KPI: Cancellation Rate

Pilot Scope

Market: TBD

Audience: Selected sellers

Duration: 3 months

Experiment

Last Mile Alert Center

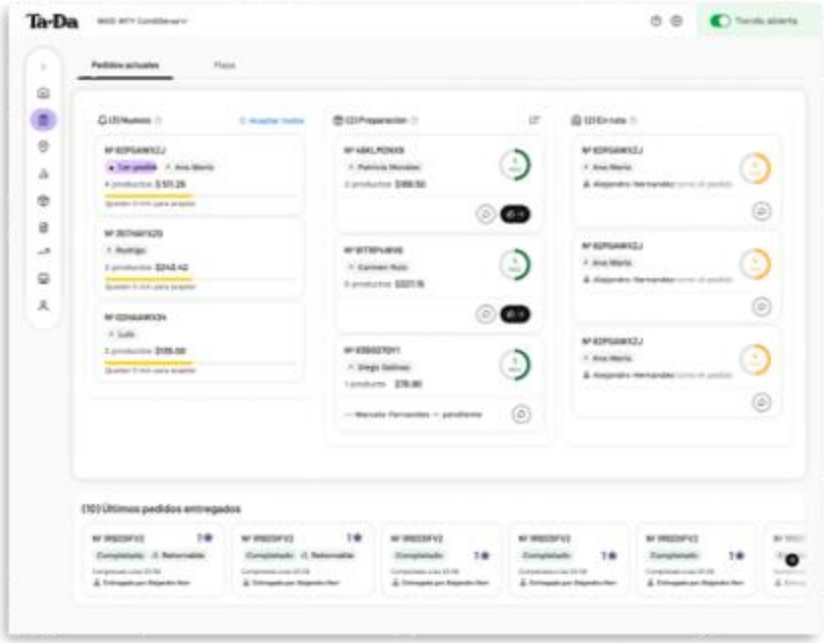

Earlier operational intervention.

WhatsApp Shortcut

Faster operational communication.

Seller Notification Center

Immediate action-required alerts.

Expected Outcome

Seller Cancellations	Courier Cancellations	Perfect Service
- 20%	- 30%	+ 3p.p
Pilot Target	Pilot Target	Pilot Target

3

Hybrid Radius

Experiment Overview

Insight

Hypotheses without development, the transfer feature shows high effectiveness 88.55% success rate reach 35.9% usage in low radius overlap ~22%

Opportunity

- Expand seller delivery radius to ensure ≥2 sellers per order
- Shift from partial coverage → full redundancy model
- Maximize recovery of seller-cancelled orders

Success Criteria: **+1pp improvement in Fill Rate** w/o Cons. Canc.
≥50% increase in recovered orders

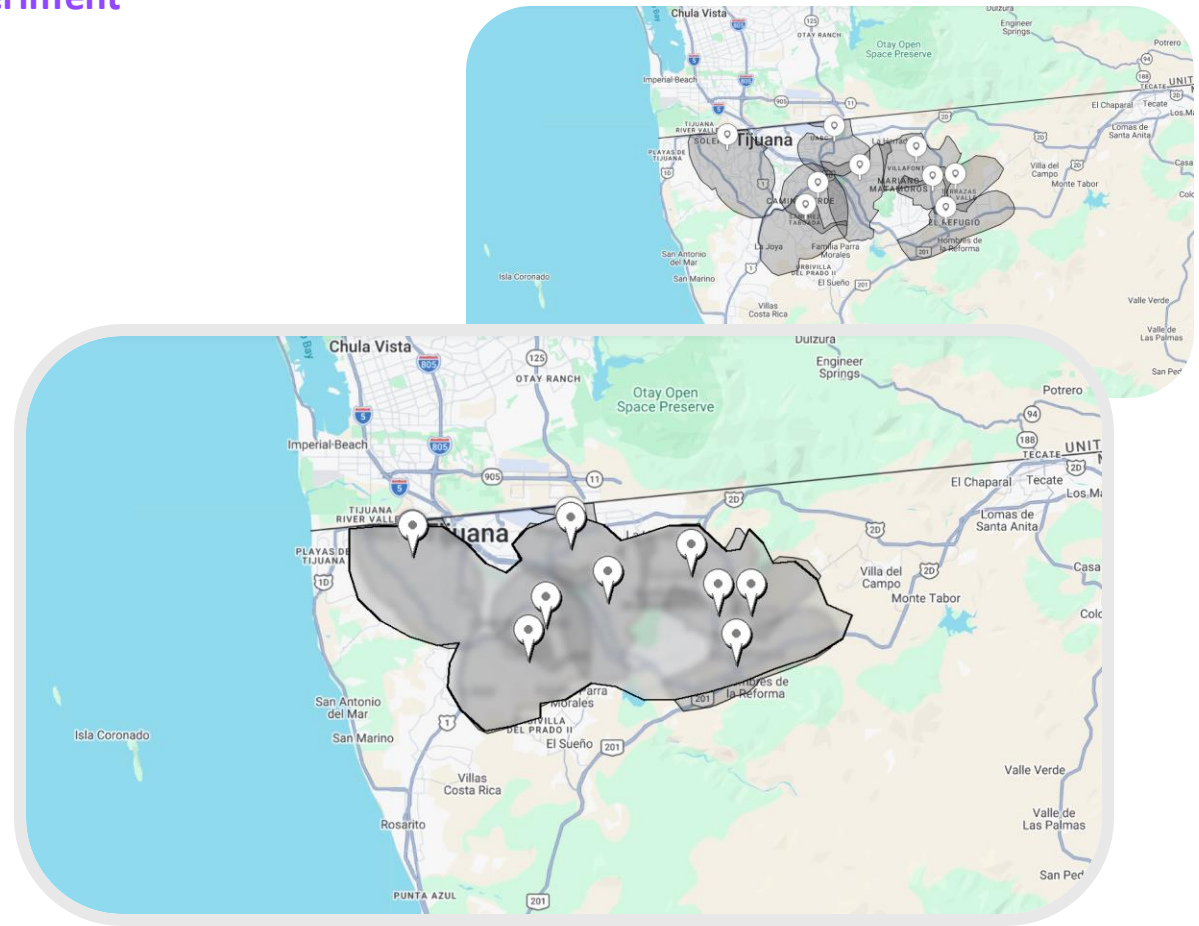

Impact

Fill Rate w/o Consumer Cancellation: **97.37% → ~ 98.5-99%**

Transfer Rate: **35.9% → ~70–85%**

Recovered Orders: **~2x increase**

Experiment

3 Turbo Delivery

Experiment Overview

Insight

Consumers purchasing for immediate consumption often abandon their purchase or order less frequently due to standard delivery times. For these occasions, delivery speed becomes a key decision factor.

Hypothesis

If eligible consumers are offered a premium delivery option with a 10–15 minute SLA, they will be willing to pay an additional fee, increasing conversion, incremental revenue and overall customer satisfaction

Primary KPI: Turbo Adoption
Secondary KPI: SLA Compliance
Guardrail KPIs: MACO & Checkout Conversion

Pilot Scope

Market: TBD

Audience: Eligible consumers within a 1–2 km delivery radius

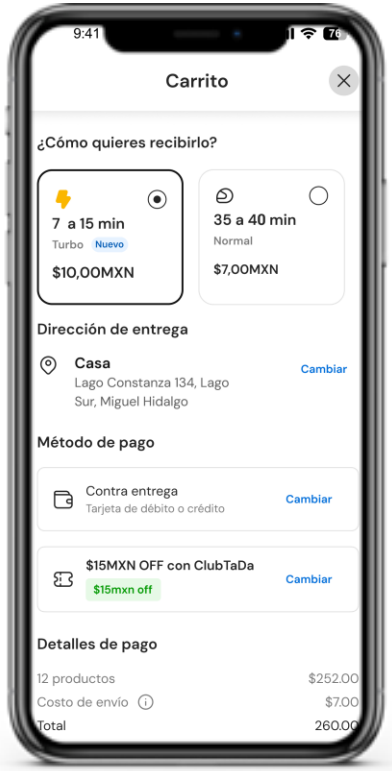

Duration: TBD

Experiment Design

Fast Delivery
10-15 min SLA

Additional Fee
Paid premium option

Priority Handling
Operational priority

Expected Outcome

Turbo Adoption	SLA Compliance
≥10%	≥90%
Pilot Target	Pilot Target

3

Edit Order

Experiment Overview

Insight

Today, consumers who need to modify an order must cancel it and manually place a new one. Although 50.4% reorder on the same day, a significant portion abandons the purchase journey, creating unnecessary revenue loss.

Hypothesis

If consumers can edit their orders through a guided replacement flow instead of restarting the purchase journey, order recovery will increase while reducing abandonment.

Primary KPI: Same-day Order Recovery

Pilot Scope

Market: TBD

Audience: Consumers requesting order changes before pickup

Duration: TBD

Experiment Design

Edit Instead of Cancel

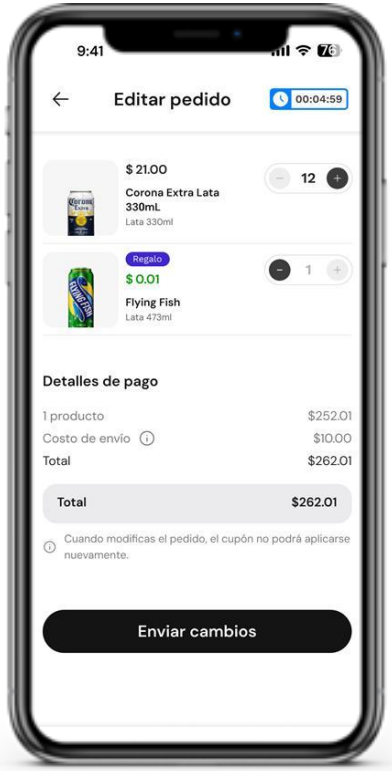

No need to start over

Automatic Recreation

Updated order is recreated

Recover Lost Orders

Less Abandonment

Expected Outcome

Same-day Order Recovery

50,4%

Baseline

→

>70%

Pilot Target

+ 19 p.p uplift

3

Real-time Delivery ETA

Experiment Overview

Insight

Current delivery estimates rely on generic predictions and provide limited visibility into courier progress, increasing customer anxiety, unnecessary support contacts and perceived delays.

Hypothesis

Providing real-time delivery estimates based on each store's operational performance will increase delivery transparency, improve customer confidence and reduce support contacts.

Primary KPI: ETA Accuracy
Secondary KPI: Deliveries Within ETA Window

Pilot Scope

Market: TBD

Audience: All post-purchase consumers

Duration: TBD

Experiment Design

Real-Time ETA
Dynamic store-based ETA

Better Visibility
Live delivery updates

Customer Confidence
Less contacts & better delivery experience

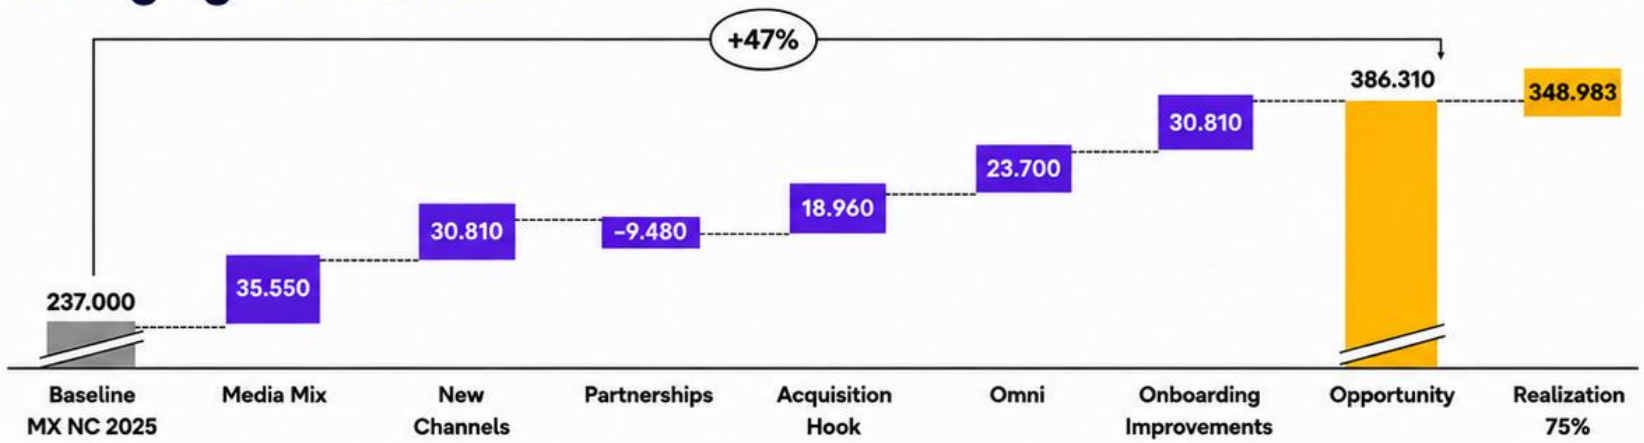

Expected Outcome

Increase	Increase	Reduce	Increase
vs. Baseline	vs. Baseline	vs. Baseline	vs. Baseline

Aug Update

2 TADA ACQUISITION LEARNING AGENDA

Learning Agenda Levers

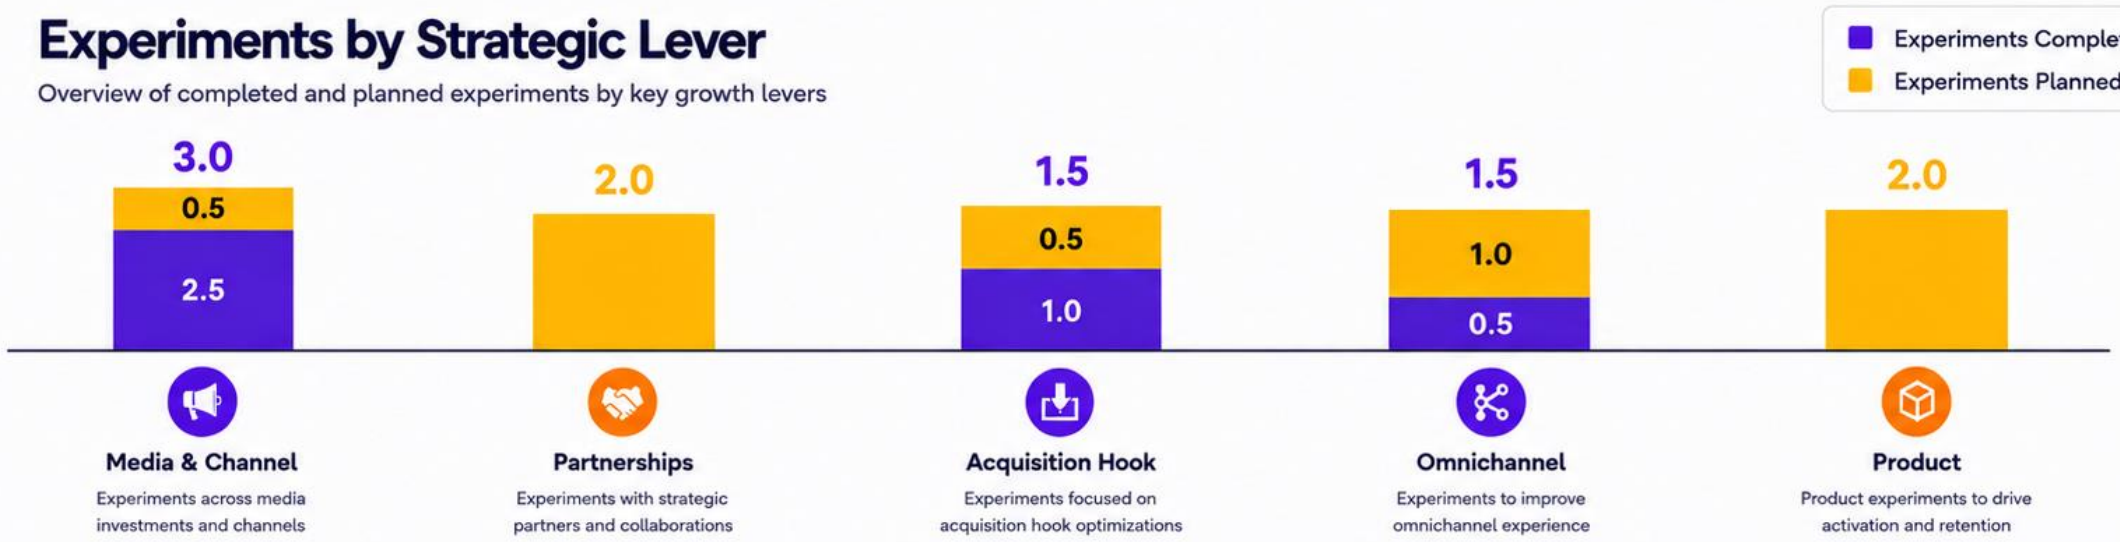

Note: NC = New Customers. CAC = Customer Acquisition Cost. LTV = Lifetime Value.

With a Realization assumption of 75%, we can conclude an opportunity to:

- **Increase NC Acquisition by +50%**
- **Reduce CAC by ~35%,** to 21 USD
- **Reaching a LTV/CAC of ~1.5** (assuming LTV stays flat)

Experiments by Strategic Lever

Overview of completed and planned experiments by key growth levers

4.0 Completed Experiments

6.0 Planned Experiments

10.0 Total Experiments

State of Business

Learning Agenda -

Name	Hypothesis	Status	Results	Key Learnings
50% Awareness / 50% Performance Media Mix	Performance campaigns are saturated. Reallocating budget toward Awareness will generate incremental new customers, according to the MMM.	**Hypothesis Validated**	17% uplift in New Customers in a 10-week experiment across Mérida and Tuxtla.	Reallocating investment toward Digital Awareness drives incremental new customer acquisition. **Next Step**: Rolled out nationally.
Educational Ads in Digital Awareness (Delta)	Explaining complex mechanics through video while prioritizing frequency will increase scan volume.	**Hypothesis Validated**	+90% Scans, +90% New Drinkers, and -9% Blended CAC in Torreón over 7 weeks.	Video outperformed static creatives in explaining complex mechanics and driving user action (scans). **Next Step**: Roll out for Copa Corona.
Jampp as an Incremental Acquisition Channel	Adding Jampp to the media mix will generate incremental new customer acquisition, according to the MMM.	**Hypothesis Not Validated**	-9 incremental New Customers (vs. synthetic control) in Oaxaca and León after 3 weeks of incremental investment. High CAC.	The MMM should be recalibrated using the results of this GeoLift experiment. Continue testing media channels, especially in the Awareness stage. **Next Step**: Calibrate the model.
Corona Six Pack + Free Shipping as an Acquisition Hook	Free shipping alone is not enough. Adding a product increases the attractiveness of the offer.	**Active**	+48% New Customers and ROI 1.5 **(Preliminary results)**	

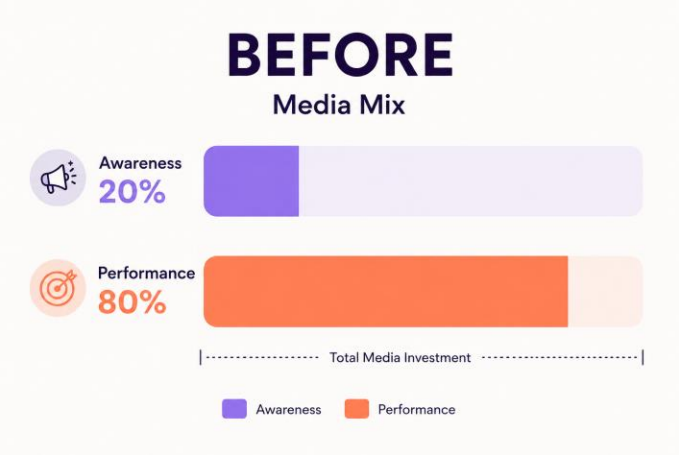

State of Business

Learning Agenda – Experiments Planned

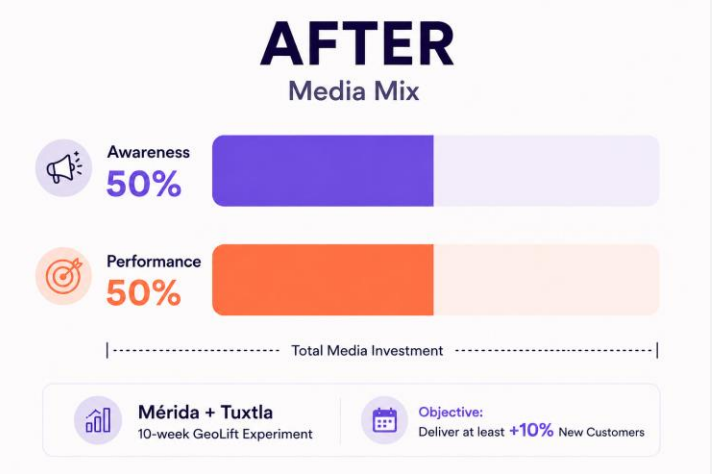

Name	Hypothesis	Status	Lever
Partnership A	Commercial partnerships in TaDa Colombia account for 15% of new customer acquisition.	**Backlog**	**Partnerships**
Partnership B	Commercial partnerships in TaDa Colombia account for 15% of new customer acquisition.	**Backlog**	**Partnerships**
Merch + Free Shipping as an Acquisition Hook	Free shipping alone is not enough. Adding exclusive merchandise increases the attractiveness of the offer.	**November**	**Media + Merch**
Free Six Pack on Performance Campaigs	Communicating the free six-pack across all Performance campaigns (Installs, Conversion, and Remarketing) will not significantly impact FMR while delivering a positive ROI.	**September**	**Media + Merch**
Welcome Page	If the Welcome Page better communicates the value proposition through updated visuals and messaging, more users will continue to authentication started.	**August**	**Product & Design**
Homepage Design	If we prioritize high-converting discovery assets on the homepage, users will find relevant product faster, increasing PDP views, add2cart and 1st order.	**September**	**Product & Design**
Copa Corona	Exclusive communications targeting non-customers from Copa Corona will drive incremental new customer acquisition at a lower cost than Paid Media CAC.	**October**	**Omnichannel**

Media Mix—Insights & Experimentation Design

Performance campaigns are saturated. Reallocating budget toward Awareness will generate incremental new customers, according to the MMM.

How we tested it

What MMM told us

- ~80% of media investment concentrated in lower funnel
- Saturation effects emerging
- Limited incremental reach
- Diminishing returns on acquisition

Hypothesis

Increasing Digital Awareness investment would expand the demand pool and improve New Customer acquisition.

Objective

Deliver at least +10% Lift New Customers

Geo + Time

Mérida & Tuxtla + **10 weeks**

Methodology

GeoLift experiment using Synthetic Control methodology (+ Business Validation)

Success Criteria: Consistent positive incrementality across control configurations and observable business impact in market.

Media Mix - Results

Hypothesis Validated

+17% Incremental Lift Confirmed Across Multiple Validation Methods

Pre/Post business results + GeoLift validation across 3 Synthetic Control Groups

PRE & POST (AVG Week)

		BAU	Target	ACT	VAR %
Merida & Tuxtla	Blended CAC	$16	$13-15	$14.1	-15.5%
	New Cons.	671	750-850	791	20%
	Budget	$10.7K	$11K	$11.1K	3%
	Orders (K)	20.2		20.1	-2%
	GMV (M)	4.9		5.1	4%
All Cities w/o Torreón	Blended CAC	$30.6		$34.8	13%
	New Cons. (K)	3.2	-	3.3	3%
	Budget	$98k		$115K	17%

✓ Statistically significant – Confidence interval 90%

Media & Channel- Results

Completed experiments

Hypothesis Not Validated

Shifting budget from Social Media Conversion to **Programmatic (Jampp)** were identified as main opportunities to drive incremental new customers **(5%)**

	BAU	Target	ACT	VAR %
Blended CAC	$54	$45-$50	$53	-2%
New Cons.	160	200-220	188	18%
Budget	$8.5K	10K	9.8K	16%

RECO

Pause investment. No incremental lift has been detected in new customers or orders. Consider retesting in higher-volume cities (+1K NC as baseline)

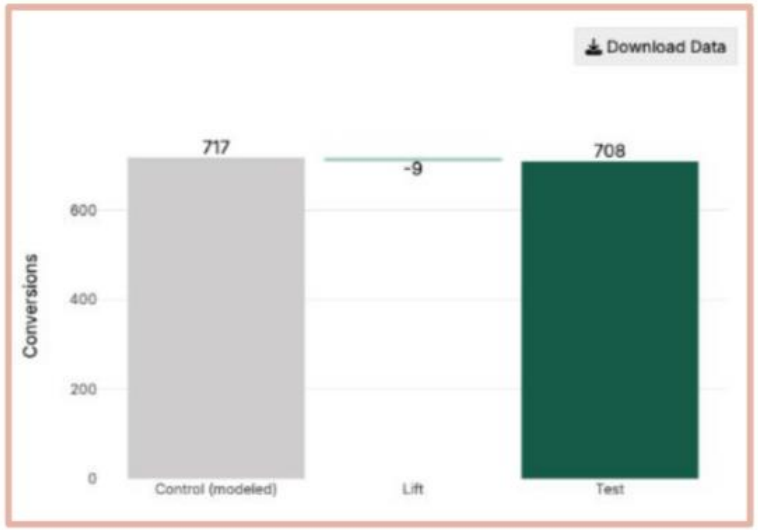

Hypothesis

CAC increased significantly since mid-2024, aligning with a **shift of budget from Google and Jampp Conversion to TikTok Conversion**. -> Reintroducing Jampp will reduce CAC.

Methodology

Geo-Lift Test in Leon & Oaxaca vs. Synthetic CG (MMM)

Estimated lift to date – (-9) incremental new customers

Media Mix & Omnichannel - Results

Completed experiments

Hypothesis Validated

Explaining complex mechanics through video while prioritizing frequency will increase scan volume.

	BAU	Target	ACT	VAR %
Blended CAC	$101	$45-$50	$92	-9%
ND DELTA	75	200-220	147	96%
Budget	$7.6	12K	$13.5K*	77%

Although digital media investment was not kept perfectly constant throughout the experiment, resulting in a modest overspend, the deviation was not large enough to compromise the validity of the test.

RECO

Optimizing the media mix by reducing Offline Media investment and maintaining Digital Media spend will improve efficiency and **reduce CAC by at least 20%**

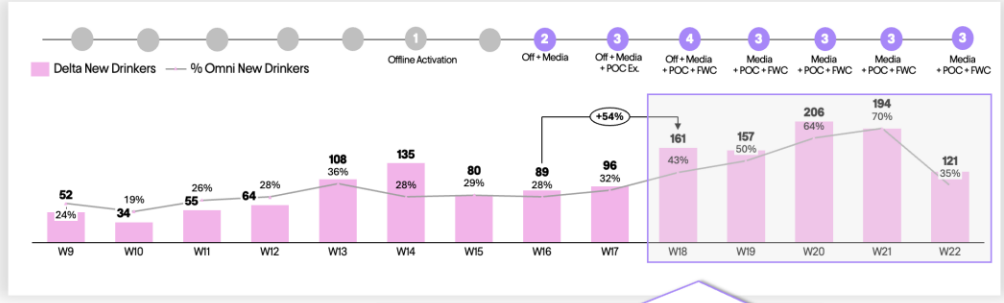

Hypothesis

Awareness campaigns on YouTube and Meta that clearly explain the value proposition and mechanics will increase new user acquisition (video format)

Methodology

Direct rollout followed by a pre-post evaluation of incremental new customer impact

DIGITAL MEDIA IMPACT IN DELTA

Acquisition Hook - Results

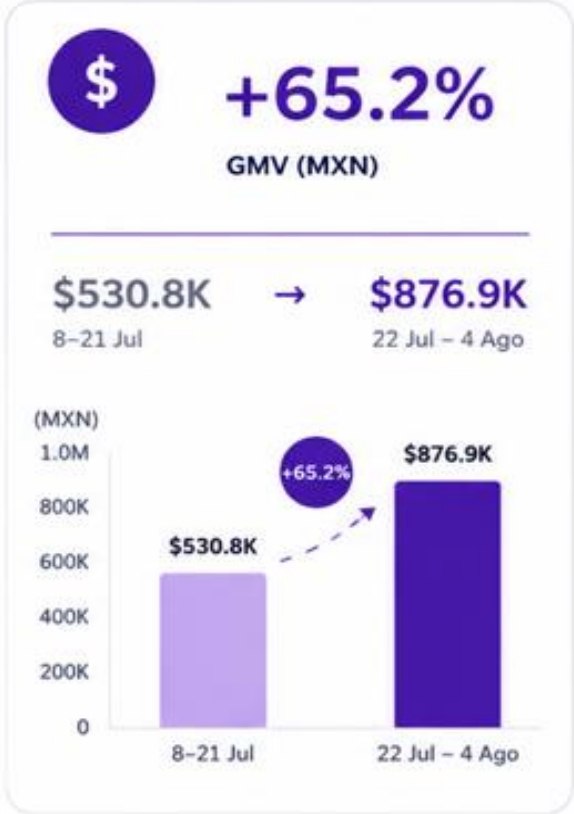

Active experiment

Preliminary Results

Mérida and Tuxtla - 4 weeks

Free shipping alone is not enough. Adding a product increases the attractiveness of the offer.

GMV growth outpaced new customer growth, driven by a higher average ticket (+13% in AOV)

72.1% of new users adopted the Corona 6-Pack Hook

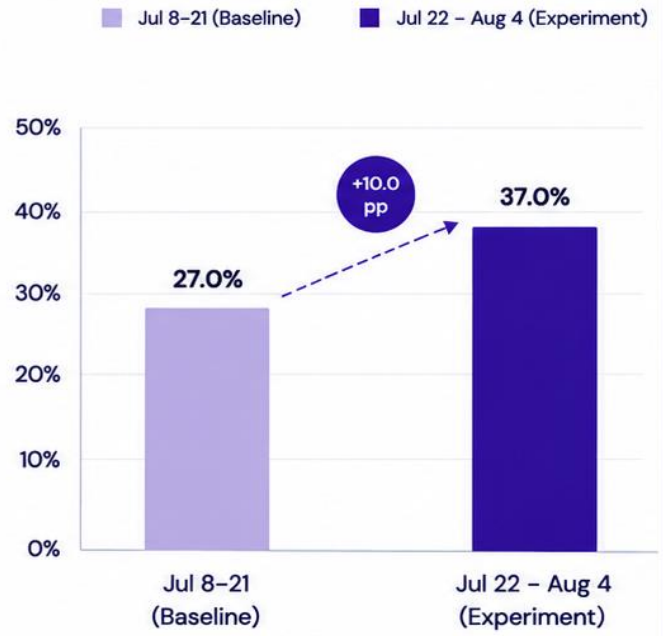

Acquisition Hook - Results

Active experiment

Preliminary Results

ONBOARDING RATE (OBD RATE)

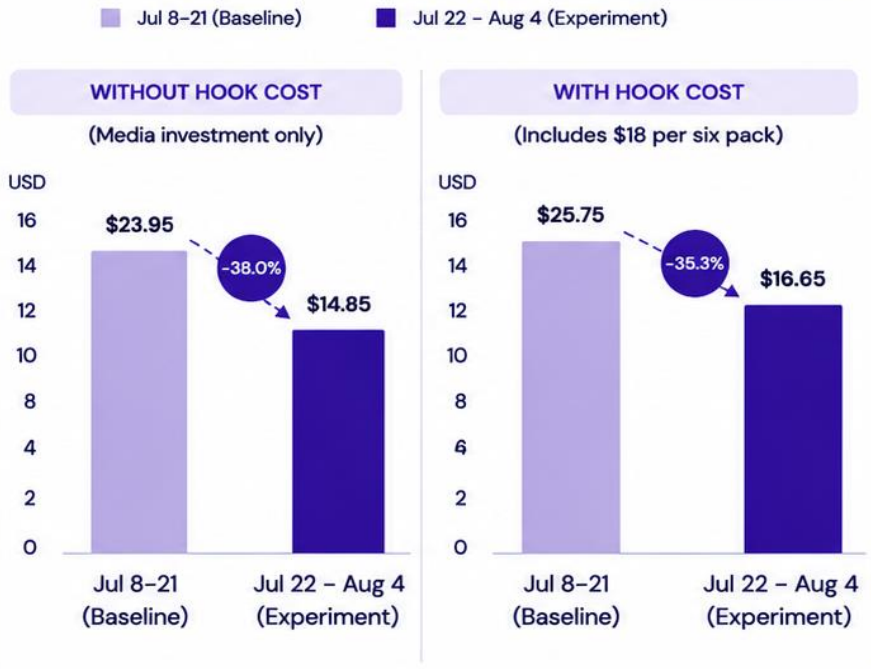

(Install → 1st Order)

BLENDED MEDIA CAC (USD)

(Total Investment / New Users)

Hook Cost (Six Pack) $18 USD per new user

PAID MEDIA CAC (USD)

(Media Investment / Users attributed to campaign)

KEY TAKEAWAYS

- **OBD Rate** improved **+10.0 pp** (from **27.0%** to **37.0%**).
- **Blended Media CAC** improved **–38.0%** without the Hook cost and **–35.3%** including the cost of the six pack.
- **Paid Media CAC** improved **–39.5%.**
- We increased installs **+13.6%** and achieved **+52.1%** more new users.

W1: Jul 8–21, 2026 (Baseline) | W2: Jul 22 – Aug 4, 2026 (Week 1 of Experiment)

Churn study recap, progress and why we are piloting in Puebla

We clarified the main churn drivers and selected Puebla to test the highest impact levers.

1

CHURN STUDY

Gradual loss is the largest churn opportunity, driven by **recurring frictions.**

Onboarding failure and **value exit** are the next biggest buckets.

Event driven churn is smaller.

2

PROGRESS SO FAR

We **deep dived** with consumers, sellers and couriers.

We **prioritized** the highest impact levers across the 3 actor journey.

We designed a test plan with **clear hypotheses**.

3

WHY PUEBLA

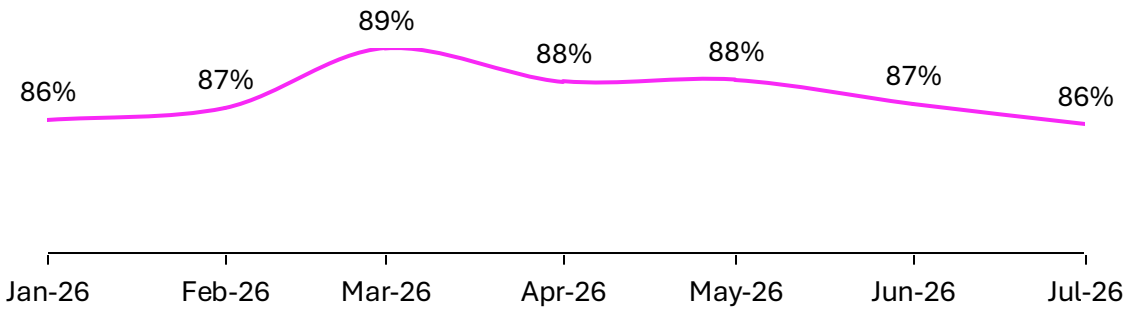

Puebla is a strategic focus city with clear opportunities to improve our service level.

The city has **visible and concentrated** operational challenges

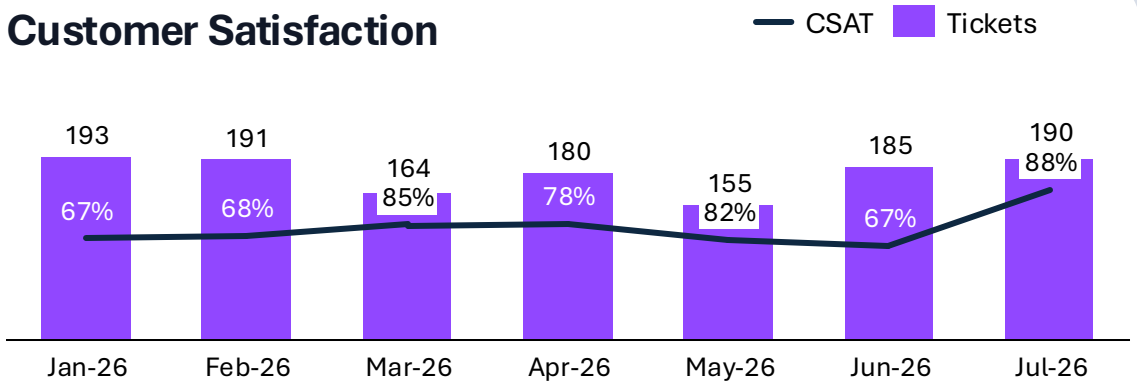

It is the right place to **test, learn fast and generate impact** at scale.

Consumer Experience KPIs – Puebla Pilot

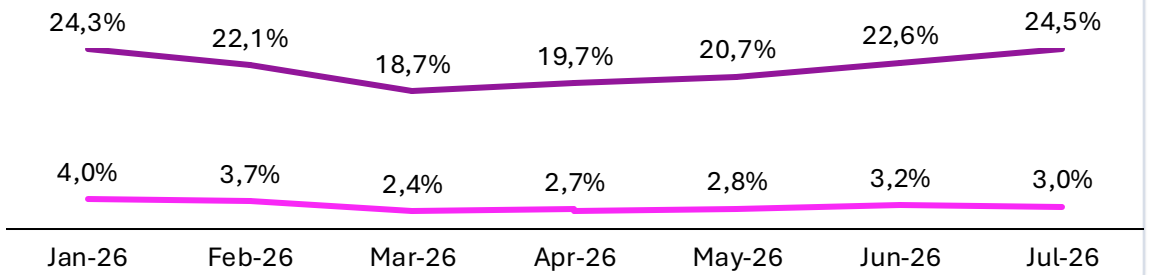

Perfect Service

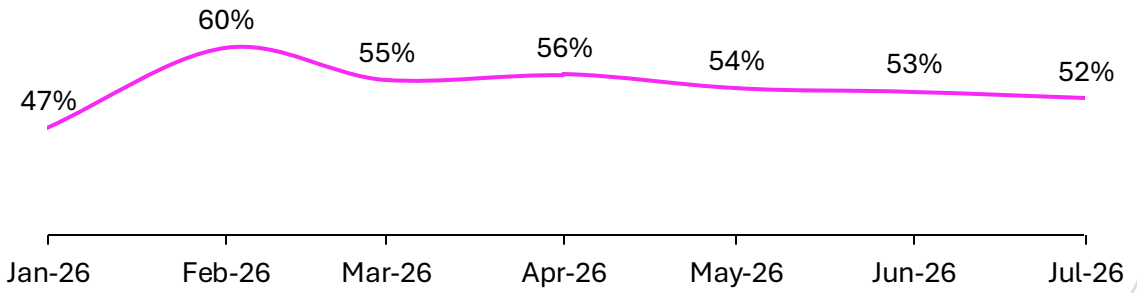

Customer Satisfaction

Users with Frictions

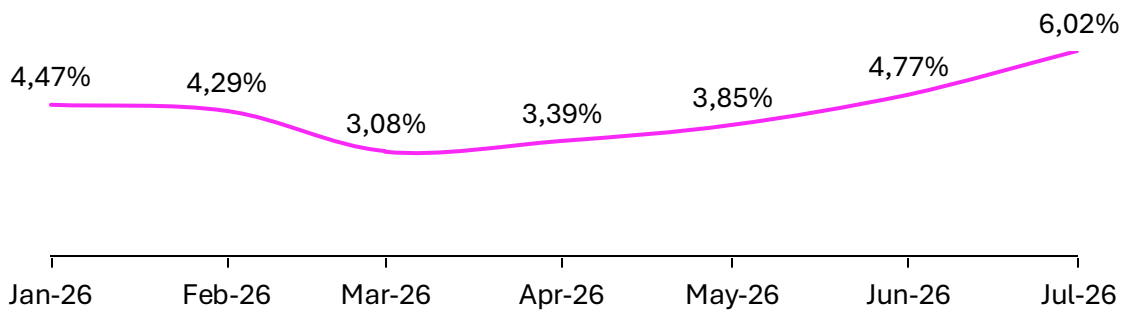

30d Reorder Rate

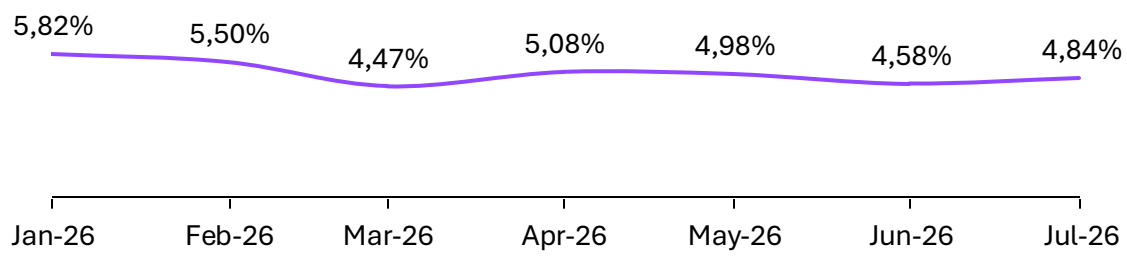

Distribution of Frictions - Puebla

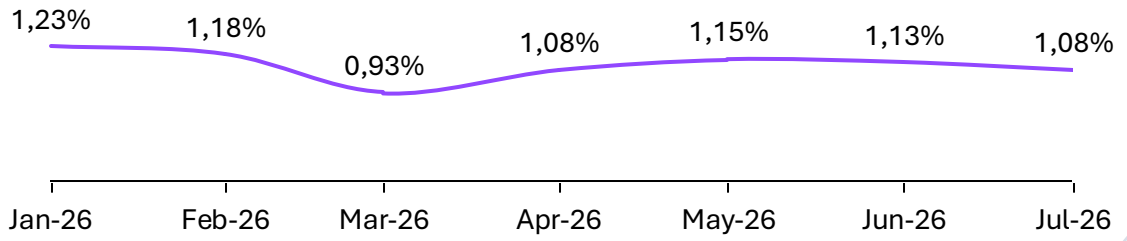

% Delays (SLA > 40min)

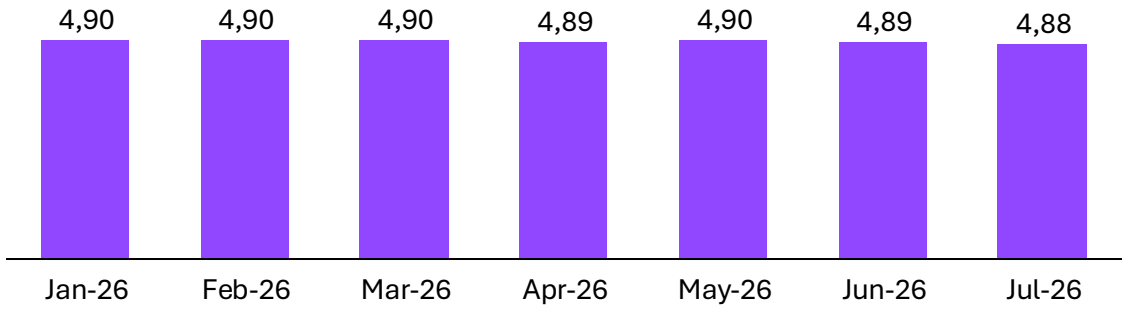

% Cancellations

Contact Rate

Order Rating

Cancellation - Root Causes

Consumer Cancellation

2.3k Users affected

56.8% of total cancellations

TOP 5 REASONS

Want to change/add products	23%
Other reason	21.5%
Incorrect address	18.1%
Incorrect payment	14.8%
Takes too long	13.2%

Seller Cancellation

1k Users affected

22.7% of total cancellations

TOP 5 REASONS

Product Out of Stock	30.4%
Delivery in Risk Area	30.1%
Operational problem	8.4%
Others	7.3%
Customer not found	6.6%

Courier Cancellation

1k Users affected

20.5% of total cancellations

TOP 5 REASONS

Other	30.4%
Wrong Address	30.1%
Customer Cancelled	8.4%
Customer Underage	7.3%
Denied Delivery Code	6.6%

KEY TAKEAWAYS

Consumer cancellations are mainly driven by **checkout and user intent issues** (change of mind, address and payment).

Seller cancellations are mainly driven by **out of stock.**

Courier cancellations are more dispersed, pointing to **execution and address quality**.

PRIORITY ACTIONS

Cancelling-Reorder Flow

Let consumers change items before the order is cancelled.

Portfolio Management Improvement

Make it easier for sellers to activate and deactivate products.

Communication Ecosystem

Enable real-time communication across consumers, couriers and stores.
